

The Secure Endpoint Challenge

As workforces become more spread out it's increasingly difficult for IT teams to provide and support secure endpoint devices. Whether you're allowing remote employees to use their own devices or supplying company-issued machines to everyone, challenges like compatibility, patching and data security become a growing concern. Add hardware refresh cycles into the mix and the task also becomes expensive.

Dizzion's zLink solutions — a suite of endpoint security products — helps organizations directly address those issues by making it easier and more affordable than ever to grant employees anywhere, on any device secure access to virtual desktops and streaming applications.

What is Dizzion zLink?

Dizzion zLink is a suite of robust, low-cost endpoint solutions that allow companies to take advantage of virtual desktops while dramatically reducing capital investment, management overhead, data security concerns and endpoint vulnerabilities.

Dizzion zLink is available in three versions to better match specific needs and use cases:

- **zLink:** A desktop conversion solution that enables organizations to extend the useful life of outdated endpoints. Compatible with any x86 64-bit based devices.
- **zLink+:** A small form factor thin client that only requires peripherals like a monitor, keyboard and mouse. Easy and affordable to ship but robust enough to support multiple monitors and two-way voice.
- **zLink Connect:** The smallest of all the zLink solutions, zLink Connect is a USB thumb drive that transforms a user's personal computer into a secure thin client when engaged.

Simple to install and even easier to ship, the zLink solutions are especially useful for remote working programs and third-party contractors. Provide users with the location flexibility they require and reduce your risk from a misplaced, stolen or unreturned device.

The zLink suite is designed to support large-scale mid-market and enterprise deployments of Dizzion's End User Computing solutions. It is the affordable way to relieve your company of the burden of endpoint device provisioning and management.

Key Benefits

Deploy in Minutes

As simple as plugging the device in, zLink+ and zLink Connect can have users fully productive in less than 5 minutes — without IT support.

Maintain Data Security

Mitigate data breach possibilities by maintaining full control and management over your data, even if users are on personal devices.

Easily Support Remote Workers

Enable robust remote working programs without worrying about the security of personal devices or the expense of providing endpoints.

Bring Old Hardware Back to Life

Convert outdated devices with incompatible operating systems into a usable thin clients.

PCI & HIPAA Compliant

Dizzion's PCI DSS and HIPAA HITECH compliant virtual desktop solutions extend to the zLink endpoints.

Managed Updates

Once configured, Dizzion handles updating and patching to ensure the zLink solutions remain secure.

HOW DIZZION zLINK SOLUTIONS HELP

Scenario	Dizzion zLink Solutions	Your Benefits
<p>You company wants to move to BOYD, but security is a concern.</p>	<p>zLink Connect can be plugged into a user's persona device. When it's engaged, the native OS is completely inaccessible and workers can only access your controlled, secure virtual desktop.</p>	<p>The corporate desktop, data and applications stay 100% isolated, ensuring security.</p>
<p>You mail remote workers laptops, but it's expensive and time consuming.</p>	<p>The zLink+ thin client is small and affordable to ship. All employees have to do is provide the monitor, mouse and keyboard.</p>	<p>Minimize shipping costs and the expense of unreturned laptops.</p>
<p>You have a supply closet filled with old laptops that are too outdated to run modern operating systems and apps.</p>	<p>Dust them off and convert them into usable thin clients with zLink (desktop converter). They can then be used to run virtual desktops or stream virtualized applications.</p>	<p>Use the hardware you've already paid for instead of buying new machines.</p>
<p>You handle payment card data or personal health information and need to be PCI or HIPAA compliant.</p>	<p>Dizzion offers both PCI and HIPAA compliant virtual desktop solutions that are independently audited annually. These audits extend to our zLink endpoint security solutions to ensure they meet the necessary requirements.</p>	<p>More easily achieve and maintain compliance.</p>
<p>Seasonal spikes are part of business, but providing part time workers with devices is expensive and complicated.</p>	<p>Stop storing unused laptops or hoping the BOYD devices of seasonal workers are updated, patched and secure. zLink Connect and zLink+ are ideal for provisioning and securing seasonal workers.</p>	<p>More affordable, requires less storage space and easier and cheaper to deploy as needed.</p>
