

# DIZZION CLOUD DELIVERED DESKTOPS

Redefining the Way the World Works

## The Shift to the Cloud

As of 2016, 95% of organizations are using cloud computing in some capacity. Yet many organizations haven't considered extending this advanced technology to one of the biggest risk factors and potential bottlenecks: the desktop.

As the global workforce continues to become more remote and access data from a wider range of devices, desktops are becoming more difficult to manage and pose a security risk. Sensitive data and important intellectual property could be walking out the door with employees each night or live thousands of miles across the country with remote workers.

With more than 50% of the workforce expected to telecommute by 2020, how do you plan to support the desktop needs of these modern, remote employees while also ensuring proper data security?

## Dizzion Virtual Desktops

Dizzion's solution is a secure, fully managed desktop as a service (DaaS) offering. By moving desktops into the cloud, companies are able to enhance end user and endpoint security. Productivity increases and work at home programs are easy to support since the secure, configured desktops are accessible anytime, anywhere, from any device.

DaaS also reduces the complexity of traditional desktop management as all virtual desktops can be adjusted, updated and patched from a central location with minimal effort and no downtime.

## Fully Managed DaaS

In-house VDI instances require dedicated teams and continuous monitoring and maintenance, taking away valuable time, budget and resources that could otherwise be focused on business-driving initiatives.

Dizzion's fully managed service allows IT teams to focus on the business while being confident that the organization's desktop needs are being met at a high level. Unlike other DaaS solutions, Dizzion's services are customized to your exact needs and use cases and ensure continuous support post-implementation. Full support includes:

- 99.99% availability SLA
- Dedicated account team
- 24x7x365 Tier II and Tier III support
- Centralized environment management and monitoring portal

## Key Benefits

### Centralized Management

Manage all desktops from a central location – whether the desktop is onsite or with a remote worker. View infrastructure, monitoring and reporting from a single pane of glass.

### Increased Productivity

Efficiently deliver hosted desktops and applications as a cloud service, removing the traditional productivity barriers of location, device and access restrictions.

### Customizable End-user Experience

Dizzion isn't a one-size-fits-all service. High-performing desktops are configured to your specifications for each user group.

### Desktop Security

More than 100 security controls allow you to control access to high-risk functions (like copy/paste and external saving). All data is stored within the secure network, never on the endpoint.

### Capital Efficient

Shift from CAPEX to predictable OPEX.

### Device Agnostic

Access via desktops, laptops, tablets, thin/zero clients and even smart phones. Ideal for BYOD and Work@Home programs.

# DIZZION CLOUD DELIVERED DESKTOPS

Redefining the Way the World Works

Key Features	Benefit
<b>Concurrent and Persistent (Non-Concurrent) desktops</b>	Generate a clean desktop environment each time an employee logs on or give knowledge workers access to a persistent desktop from any device.
<b>Multi-layered security, including enterprise grade antimalware</b>	Security at each layer of the virtual desktop infrastructure from the physical data center to the endpoint device to create a secure, controlled environment.
<b>100+ user controls</b>	Implement role-based controls to limit what actions each user group can perform, such as turning off copy/paste, USB drive access, saving to unapproved application, email access and more.
<b>High availability infrastructure</b>	Enterprise-grade hardware, proprietary storage tier, VDI-optimized compute resources and low latency network design deliver a reliable user experience with maximum uptime.
<b>Independently verified PCI and HIPAA HITECH compliant desktops (optional)</b>	More easily achieve and maintain compliance and complete future audits.
<b>Industry leading 250-500 IOPS per virtual desktop</b>	Fast virtual desktop performance that results in a positive end user experience and increased productivity.

*“Dizzion is the only solution we found that kept up with our needs to have a consistent and manageable environment for our virtual workforce. With Dizzion, I have the same level of control in our virtual environment that I have in our brick and mortar location.”*

— Andy Schrider, CEO, Stateside BPO
