

VIRTUAL DESKTOPS FOR FINANCIAL SERVICES

Meeting Today's Technology Demands

With the evolving threat landscape and changing employee demands, top concerns of CIOs in the financial services industry include security, compliance, securely and economically enabling contractors, and managing Bring You Own Device (BYOD) programs. Cybersecurity overall remains the top concern within the industry, with 56% of DTCC survey respondents citing it as a top five risk.

Dizzion's virtual desktops help financial services organizations address these key areas of concern by making it easy to implement and control security and compliance at the end user, endpoint level. Our fully managed desktop-as-a-service (DaaS) solutions allow end users to access data and applications from a secure, high-performing virtual desktop anywhere, anytime, from any device.

Heightened Desktop Security

One of the leading causes of data breaches is lost or stolen data stemming from an improperly accessed device or a malicious employee. With Dizzion's virtual desktops, data is never stored on the vulnerable endpoint, meaning if a device is lost or stolen the data is inaccessible and secure.

More than 100 user-level controls let you limit the actions end users can take, such as restricting copy/paste, print, screen shot and external saving functions so you have better control over how data is accessed, transmitted and stored.

Virtual desktops offer the same experience and level of security regardless the user's device, meaning financial services organizations can support BYOD initiatives and employee mobility without compromising security and compliance standards. Dizzion also offers secure endpoint solutions (called the zLink suite) that make it easier for organizations to provision contractors with secure desktop environments as needed.

PCI Compliant

Dizzion offers an independently verified PCI compliant DaaS solution to help ensure the sensitive data handled by your company stays compliant and secure within the desktop environment. Dizzion's compliant solutions make it easier for organizations to achieve and maintain compliance and complete future audits.

Key Benefits

Security & Controls

More than 100 user-level controls to limit the actions users can take, allowing for increased data control and security.

High Performance

Purpose-built for speed and optimal performance on infrastructure that delivers 99.99% availability.

Compliant Desktops

Independently verified PCI & HIPAA compliant cloud delivered desktops available, making it easier to achieve and maintain compliance.

Business Continuity

Ensure employees always have access to mission-critical applications and data.

Secure Endpoint Solutions

Dizzion offers multiple secure, fully managed endpoint solutions to help you remove the burden of endpoint security, support and maintenance.

VIRTUAL DESKTOPS FOR FINANCIAL SERVICES

BENEFITS FOR FINANCIAL SERVICES

CHALLENGE	FEATURE	BENEFIT
Secure PII and PCI data	100+ user controls to restrict functions like copy/paste, external saving, printing, etc. Data is never stored on local devices.	Take a proactive stance in protecting the sensitive information your organization handles.
Provide a compliant desktop environment	Independently verified PCI & HIPAA HITECH compliant solutions.	Ensure all employees and contractors are working in a secure, compliant environment at all times.
Support legacy applications necessary for business operations	Application virtualization and delivery.	Ensure all employees have access to the necessary legacy applications, regardless of device or OS version.
Support employee mobility	Reliable, configured desktops accessible via an online portal from any device with an internet connection.	Allow employees to work from anywhere, including work at home and bring your own device (BYOD) initiatives.
Manage IT needs of third party contractors	Secure desktops configured with your business-critical applications — accessible from any device.	Ability to quickly on-ramp contractors without complicated provisioning and IT management processes.

Moving to cloud is not the giant leap some financial services firms might think it is; many are already using cloud apps as part of everyday operation without even realising.
