

VIRTUAL DESKTOPS FOR HEALTHCARE

Current State of the Healthcare Industry

The healthcare industry is experiencing a range of new challenges that need immediate attention. Increased concerns about PHI, more mobile healthcare options (i.e. telehealth, in-home healthcare, etc.), use of third-party contractors, consolidation and other driving factors are making healthcare organizations throughout the industry take a careful look at their technology solutions to ensure they're effectively and efficiently meeting these challenges.

Dizzion's cloud delivered desktops help healthcare organizations and their business associates work efficiently within a compliant desktop environment. Our fully managed desktop-as-a-service solution is designed to support an increasingly mobile and contractor-heavy workforce, allowing users to access a reliable, high-performing desktop experience from anywhere, anytime, on any device.

HIPAA HITECH Compliant

Dizzion offers DaaS solutions that have been independently verified as HIPAA HITECH compliant. Our compliant solution allows healthcare organizations to glean the benefits of DaaS while maintaining high compliance standards. Dizzion's compliant solution offerings make it easier for organizations to achieve and maintain compliance as well as complete future audits.

Dizzion provides a Business Associate Agreement (BAA) to ensure our relationship meets HIPAA requirements.

Support Remote & Mobile Workers

Cloud delivered desktops are an ideal solution for supporting mobile workers, work at home employees, third-party contractors and bring your own device (BYOD) initiatives while ensuring consistent access to mission-critical data and applications.

Secure End Points

No matter where your employees are or what device they're using, data is never stored on the local device, helping protect PHI in cases of device loss or theft. This is particularly important as laptops and tablets see more use within healthcare settings. For additional endpoint security, Dizzion offers a range of secure endpoint solutions — known as [zLink](#) — that help with everything from creating an isolated desktop environment on personal devices to extending the life of older hardware.

Key Benefits

HIPAA HITECH Compliant

Independently verified HIPAA HITECH compliant cloud delivered desktops available, making it easier to maintain compliance.

PCI DSS Compliant

Dizzion also has an independently verified PCI DSS compliant solution for healthcare organizations that collection, store, transfer or process payment card data.

Security & Controls

More than 100 user-level controls to limit exactly what employees see and what actions they can take.

High Performance

Purpose-built for speed and performance on infrastructure that delivers 99.99% availability.

Business Continuity

Ensure employees always have access to mission-critical applications and data with disaster recovery options.

VIRTUAL DESKTOPS FOR HEALTHCARE

BENEFITS FOR HEALTHCARE

| CHALLENGE | FEATURE | BENEFIT |
|--|---|--|
| On-board new contractors for processing, data entry, transcribing, etc. | Customized desktop golden images to fit specific use cases. | Fast scaling by quickly deploying the appropriate desktop configuration. |
| Providing a HIPAA compliant device and desktop environment | Dizzion's independently verified HIPAA HITECH compliant solution and secure endpoint options. | Ensure all employees and contractors are working in a secure environment when handling PHI. |
| Working with compliant business associates | Dizzion provides and signs a HIPAA compliant BAA. | Peace of mind that Dizzion is abiding by HIPAA requirements as a covered business associate. |
| Support legacy applications necessary for business operations | Application virtualization and delivery. | Ensure all employees have access to the necessary legacy applications, regardless of device or OS version. |
| Secure Personal Health Information | 100+ control options to restrict functions like copy/paste, external saving, printing, etc. All data is stored in your secure cloud, rather than on the local device. | Takes a proactive stance against PHI being mishandled, maliciously copied or lost. |
| Supporting employee mobility | Reliable, configured desktops accessible via an online portal. | Reduce the amount of time clinical employees waste logging into a new system in each room. |
| PCI compliance when collecting, storing and transmitting payment data | Dizzion's independently verified PCI compliant solution. | More easily meet PCI DSS compliance requirements and simplify future PCI audits. |
