DIZZION

DIZZION zLINK ENDPOINT SOLUTIONS

KEY BENEFITS

Deploy in Minutes
Download (zLink BYOD) or plug-and-play (zLink/zLink+). Ready in less than 5 minutes without IT support.

Maintain Data Security
Full control and management over your data, even with personal devices.

Easily Support Remote Workers
Enable robust remote working without worrying about personal device security or expensive endpoints.

Bring Old Hardware Back to Life
Convert outdated devices with incompatible operating systems into a usable thin clients.

PCI & HIPAA Compliant
Dizzion's PCI-DSS and HIPAA/HITECH-compliant managed desktop-as-a-service extends to zLink endpoints.

Managed Updates
Once configured, Dizzion handles updating and patching to ensure zLink solutions remain secure.

Endpoint security solutions to fit any use case

The Secure Endpoint Challenge: as workforces become more spread out, it is increasingly difficult for IT teams to provide and support secure endpoints. Whether you are allowing remote employees to use their own devices or supplying corporate machines, challenges like compatibility, patching and data security become a growing concern. Add hardware refresh cycles and the task also becomes expensive.

Dizzion zLink endpoints help organizations address those issues by making it easier and more affordable to grant employees secure access to virtual desktops and streaming applications - on any device, anywhere.

What is Dizzion zLink?

Dizzion zLink is a suite of robust, low-cost endpoint solutions that allow companies to take advantage of virtual desktops while dramatically reducing capital investment, management overhead, data security concerns and endpoint vulnerabilities.

Choose from three zLink options.

- **zLink** | A desktop conversion solution that enables organizations to extend the useful life of outdated endpoints. Compatible with any x86 64-bit based devices.

- **zLink+** | A small form factor thin client that only requires peripherals like a monitor, keyboard and mouse. Easy and affordable to ship but robust enough to support multiple monitors and two-way voice.

- **zLink BYOD** | Downloaded software that enables compliant controls and validation of an end-user's Windows machine. zLink BYOD allows only Dizzion services to be accessed during work time. Attempts to access personal/other files are denied.

Simple to install and even easier to ship, the zLink solutions are especially useful for remote working programs and third-party contractors. Provide users with location flexibility reduce the risks of misplaced, stolen or unreturned devices.

zLink is designed to support mid-market and enterprise deployments of Dizzion end-user computing solutions. It is the affordable way to relieve your company of the burden of endpoint device provisioning and management.

HIPAA   PCI DSS COMPLIANT   AICPA SOC 2

HOW DIZZION zLINK SOLUTIONS HELP

SCENARIOS	DIZZION ZLINK SOLUTIONS	YOUR BENEFITS
Your company wants to move to BYOD, but security is a concern.	zLink BYOD gets downloaded on a personal device and when it's engaged, the native OS is inaccessible. Workers can only access Dizzion managed DaaS/ approved resources.	The corporate desktop, data and applications stay 100% isolated, ensuring security.
You ship remote-worker laptops, but it's expensive and time consuming.	zLink thin clients are small and affordable to ship. All employees have to do is provide the monitor, mouse and keyboard.	Minimize shipping costs and the expense of unre-turned laptops.
You have a supply closet filled with old laptops that are too outdated to run modern operating systems and applications.	Convert old machines into Dizzion Managed DaaS-ready thin clients with zLink desktop converter.	Use the hardware you've already paid for instead of buying new machines.
You handle payment card data or personal health information (PHI/ePHI) and need to be PCI-DSS or HIPAA compliant.	Dizzion offers both PCI-DSS and HIPAA-compliant managed DaaS solutions that are independently audited every year. These audits extend to zLink to ensure they meet the necessary requirements.	Increase efficiency when achieving and maintaining compliance.
Seasonal spikes are part of business, but providing part-time workers with company-issued devices is expensive and complicated.	Stop storing unused laptops or hoping seasonal worker BYOD devices are updated, patched and secure. zLink is ideal for provisioning and securing seasonal workers.	• Cost-effective • Reduced storage space • Easy to deploy
